

BP6211B

Fast Turn-Off Synchronous Rectifier for CCM/DCM Flyback Converter

Integrated 60 V / 14 m MOSFET

Description

The BP6211B is a high-performance, high-integration, self-biased synchronous rectifier (SR) with a 60 V MOSFET integrated for flyback converters. It can replace the secondary diode rectifier for higher efficiency and power density.

The BP6211B supports discontinuous conduction mode (DCM), quasi-resonant (QR) and continuous conduction mode (CCM) operations. Robust operation in CCM is enabled with adaptive gate drive and faster turn-off speed with 4 A sink current and ultra-short turn-off delay.

The internal ringing detection circuitry prevents the IC from falsely turning on during DCM or QR operations. The internal turn-on blanking function prevents an accidental turn-off due to parasitic ringing. Ultra-short turn-on delay increases SR MOSFET conduction time to improve efficiency.

The BP6211B generates its own supply voltage without requiring auxiliary winding for low-side or high-side rectification. This feature makes it suitable for charger applications with a very low output voltage or wide output voltage range.

The BP6211B is available in an SOP-8 package.

SOP-8 Package

Features

Adaptive gate drive and faster turn-off speed
Supports DCM, QR and CCM operations

Ringing detection prevents false turn-on in DCM Supports low-side and high-side rectification

Self-biased and no need for auxiliary winding for high-side rectification

Supports wide output voltage range down to 0V 4 A sink gate driver prevent false turn-on by the miller effect

Ultra-short turn-on delay, increase MOSFET conduction time, optimize efficiency

Low quiescent current

Compatible with energy efficiency regulations

Applications

QC, USB-PD and PPS AC-DC Chargers
High Efficiency Adaptors
High Efficiency and Power Density

High Efficiency and Power Density Flyback Converters

Typical Application

Pin Functions

Pin NO.	Pin Name	Description
1	VCC	Linear regulator output. VCC is the supply of the BP6211B.
2	VD	MOSFET drain voltage sensing. VD is also used as the linear regulator input.
3 4	S	MOSFET source. S is also used as a reference for VCC.
5 6 7 8	D	MOSFET drain.
